Short-term recovery

Gerhard Winzer

Growth is weak, and the downside risks are elevated. However, in a pre-emptive move, the market has already priced in the materialisation of some of the risks. The current development would not immediately suggest it. A short-term phase of recovery on the equity markets would fit this picture.

The past days and weeks have not been easy. The market participants feel unsettled, and pessimism has been on the rise. While the former is justified, we regard the degree of pessimism as overshooting, at least in the short run. The market now has a drastic and imminent economic weakening, i.e. a partial materialisation of the existing risks, priced in.

Indeed, the currently available data do not suggest any reason for euphoria: economic growth is low. Global GDP growth in Q4 2015 was down to only +1.8% relative to the previous month. In addition, for the coming quarters important leading indicators such as those provided by the OECD suggest a decline in economic growth in the industrialised countries and stabilisation on low levels in the emerging economies. The trend of disappointed growth expectations, in place for years now, will presumably continue. The data do not indicate an imminent recession. For example, the fallen oil price supports retail sales in the USA.

Global inflation is very low. If the energy prices stabilise, annual inflation rates will rise slightly in the second half of the year on the back of the base effect. The possible second-round and spill-over effects from the falling goods prices to the higher service prices are an aspect worth monitoring. The central banks are unlikely to achieve their respective inflation targets in the foreseeable future. In the wake of the drastic fall of the inflation rates priced into the bond yields, the inflation expectations of consumers have now also fallen in the USA. The data do not suggest a transition from low inflation ("lowflation") to deflation, although the risk of this situation occurring remains elevated.

Oilprice development (01/2006 – 02/2016)

Stabilisation of commodity prices and emerging currencies

In addition to the disappointed growth expectations (with regard to real GDP and inflation), the decline in commodity prices and the adjustment process in the emerging economies are affecting the markets. Commodity prices and emerging currencies have stabilised especially due to the hefty decline in expected interest rate hikes in the USA and the resulting depreciation of the trade-weighted US dollar. The situation remains tense. Among other things, the liquidity situation has deteriorated in the emerging economies. In addition, in China both exports and imports are on the decline, and the Chinese foreign exchange reserves have been dropping rapidly.

The financial environment has become more restrictive. Share prices have fallen, spreads (default risk) have widened, and volatilities have increased. There is the risk of negative feedback of stress from the financial markets to the banking sector and the real economy. Stabilising markets would curtail this risk.

Central banks have reacted to this environment with expansive strategies. More and more central banks are implementing a negative interest rate policy. At the end of January the Japanese central bank cut the interest rate for additional surplus liquidity of commercial banks deposited with the central bank to minus 0.1%. The European Central Bank will cut the interest rate on deposit accounts further from currently -0.30% (with -0.50% currently priced in). In an important speech to the US Congress, the US Fed president Yellen also advocated a wait-and-see stance. A rate hike in the USA does not fit the fragile global environment. The only stagnating monetary base (M0) seems to be disadvantageous enough to the financial markets.

The negative interest rate policies pursued by the central banks also create collateral damage. Among other things, they eat into the profitability of banks. This, too, explains the revaluation of the banking sector (as does the increased systematic risk).

The prospectus for UCITS funds (including any amendments) is prepared and published in accordance with the provisions of the InvFG 2011 as amended. Information for Investors pursuant to § 21 AIFMG is prepared for the alternative investment funds (AIF) administered by Erste Asset Management GmbH pursuant to the provisions of the AIFMG in conjunction with the InvFG 2011.

The currently valid versions of the prospectus, the Information for Investors pursuant to § 21 AIFMG, and the key information document can be found on the website www.erste-am.com under "Mandatory publications" and can be obtained free of charge by interested investors at the offices of the Management Company and at the offices of the depositary bank. The exact date of the most recent publication of the prospectus, the languages in which the key information document is available, and any other locations where the documents can be obtained are indicated on the website www.erste-am.com. A summary of the investor rights is available in German and English on the website www.erste-am.com/investor-rights and can also be obtained from the Management Company.

The Management Company can decide to suspend the provisions it has taken for the sale of unit certificates in other countries in accordance with the regulatory requirements.

Note: You are about to purchase a product that may be difficult to understand. We recommend that you read the indicated fund documents before making an investment decision. In addition to the locations listed above, you can obtain these documents free of charge at the offices of the referring Sparkassen bank and the offices of Erste Bank der oesterreichischen Sparkassen AG. You can also access these documents electronically at www.erste-am.com.

N.B.: The performance scenarios listed in the key information document are based on a calculation method that is specified in an EU regulation. The future market development cannot be accurately predicted. The depicted performance scenarios merely present potential earnings, but are based on the earnings in the recent past. The actual earnings may be lower than indicated. Our analyses and conclusions are general in nature and do not take into account the individual characteristics of our investors in terms of earnings, taxation, experience and knowledge, investment objective, financial position, capacity for loss, and risk tolerance.

Please note: Past performance is not a reliable indicator of the future performance of a fund. Investments in securities entail risks in addition to the opportunities presented here. The value of units and their earnings can rise and fall. Changes in exchange rates can also have a positive or negative effect on the value of an investment. For this reason, you may receive less than your originally invested amount when you redeem your units. Persons who are interested in purchasing units in investment funds are advised to read the current fund prospectus(es) and the Information for Investors pursuant to § 21 AIFMG, especially the risk notices they contain, before making an investment decision. If the fund currency is different than the investor's home currency, changes in the relevant exchange rate can positively or negatively influence the value of the investment and the amount of the costs associated with the fund in the home currency.
