YIELD RADAR: January 2018

Paul Severin

The strong economy together with the good sentiment on financial markets supports the preference of the investors towards riskier asset classes. Inflation in the developed economies remains subdued. Many market participants expect inflation to moderately pick up during the course of the year. US Federal Reserve bank will continue its policy of moderate rate increases. At least three more interest rate hikes are realistic in 2018. For the Eurozone a first increase of the base rate is expected in the coming year at the earliest.

Valuation leads to a more differentiated view with respect to riskier asset classes. Namely high yield bonds suffered in their attractiveness due to its excellent performance. Emerging market bonds are still interesting. Sovereign bonds in the Eurozone and in the US are exposed to higher risk due to the outlook for higher yields during the course of this year.

1) NB: the fund ratio “yield” equals the average yield of the securities held by a fund prior to costs for forex hedging; please bear in mind that this ratio is not equivalent to the fund performance. For the fund performance (i.e. the development of the value) of the aforementioned funds, please refer to the overview table on page three. The above-cited table does also not account for any fees reducing return such as the management fee or individual account or depositary fees.

2) The risk classification of investment funds is based on the SRRI-indicator. The calculation is based on European regulatory requirements and forms an integral part of the Key Investor Document and gives the historical volatility of the fund unit price on a scale from 1 to 7, with 7 being the highest risk. More information about the calculation of the indicator:

Data as of 29.12.2017.

The performance and volatility (3 years) is calculated in accordance with the OeKB method. It already includes the management fee. However, the illustration is net of the one-off load of up to 3.50%, which falls due at the time of purchase, and of other fees that reduce the return as well as of the individual account and deposit fees. Past performance is not a reliable indicator of the future performance of a fund.
